Screenshots of Visualizations

This image shows the missing data in the dataset. Total bedroom has some missing values.

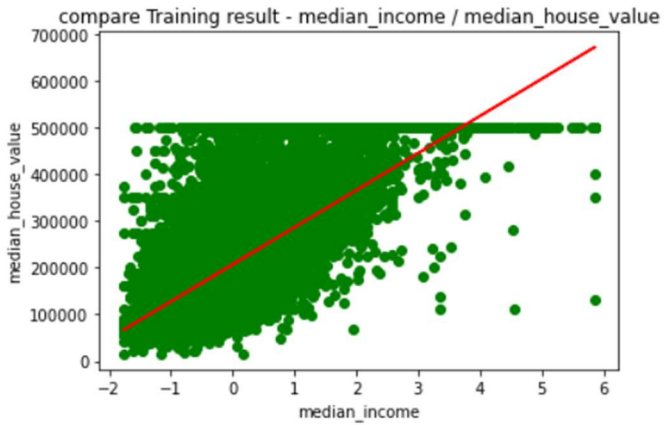

This image shows that there are no more missing observations in the dataset after treatment was conducted on missing values. Missing values were filled with the mean of the variable.

This heatmap shows the correlation of all variables in the dataset.

This scatter plot shows how well the model has predicted the response.

compare Training result - median_income / median_house_value

compare Testing result - median_income / median_house_value

These scatter plots show how median income affect median house value.
